EXERCISE – 8

Question

Execute and display the results of the following Nmap service version and OS detection commands in Kali Linux operating system:

i) Detect the version of services running
ii) Aggressive scan
iii) Detect operating system of the target

Aim

To execute and display the results of Nmap service version and OS detection commands in Kali Linux.

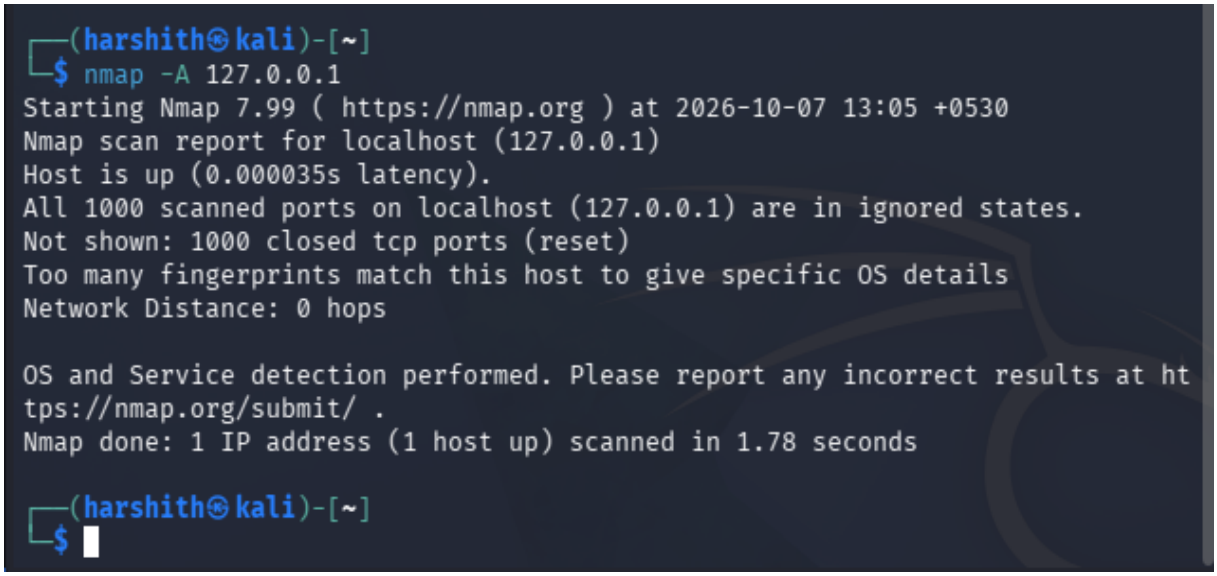

1. DETECT THE VERSION OF SERVICES RUNNING

Command:

nmap -sV 127.0.0.1

Use:

The -sV option is used to detect the versions of services running on the target.

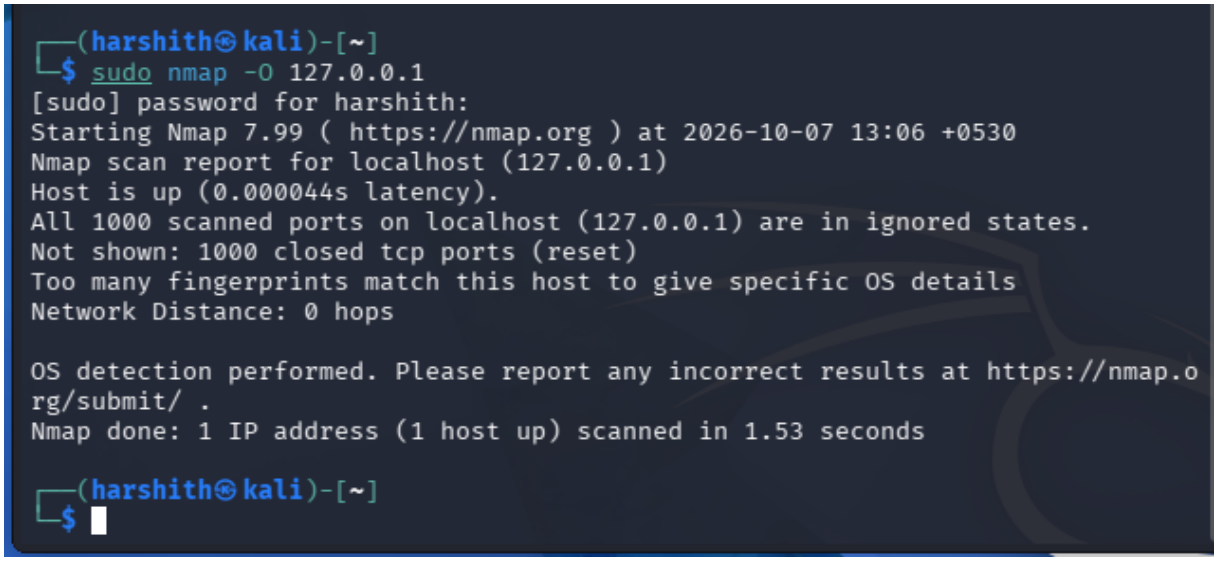

2. AGGRESSIVE SCAN

Command:

nmap -A 127.0.0.1

Use:

The -A option enables aggressive scanning features including service, OS, and other detection techniques.

3. DETECT OPERATING SYSTEM OF THE TARGET

Command:

sudo nmap -O 127.0.0.1

Use:

The -O option is used to detect the operating system of the target.

Result

Thus, the Nmap service version, aggressive scan, and operating system detection commands were successfully executed in Kali Linux and their results were displayed.
